About us

We work closely with businesses to understand their unique needs and goals, and we tailor our services to meet those needs.

Dataceria is a leading Big Data consulting firm specializing in data-driven solutions for businesses of all sizes. We help organizations unlock the full potential of their data assets by providing end-to-end solutions that span from strategy and architecture to implementation and support. Our team of expert consultants have extensive experience working with a variety of industries, including healthcare, finance, retail, and more. We are committed to delivering high-quality services that help our clients achieve their business objectives by leveraging data analytics, artificial intelligence, and machine learning.

Services

DATA ENGINEERING

Dataceria offers advisory, implementation, and operation services in data engineering, with a focus on reducing the cost of ownership, avoiding technical debt, and improving long-term sustainability.

CLOUD COMPUTING

The best combination of Private/Public cloud platforms for sustainable business results. Whether you are starting or expanding your cloud journey, our services include cloud migration, modernization, and optimization supportto maximize your investments."

ARTIFICIAL INTELLIGENCE & MACHINE LEARNING

By partnering with us, you can benefit from our knowledge and experience to drive short-term wins and optimize your AI adoption efforts. Let us help you take your business to the next level with the power of advanced analytics and AI. By combining these two elements, businesses can make informed decisions and achieve tangible results through the effective use of their data.

DATA ANALYTICS

Dataceria, with its extensive expertise and experience in both commercial and open -source tools, can assist organizations in exploring all options and aligning the right technology to meet their unique data engineering and analytics requirements."

DATA SCIENCE

They enables their clients to turn their raw data into insights that drive decision-making. Its applications are diverse, ranging from optimizing business processes to solving complex social problems.

Sectors

HEALTHCARE

As healthcare and life sciences organizations navigate the challenges of transformation, we are committed to partnering with visionary enterprises and innovative start-ups to create a more resilient, agile, and patient-centred healthcare system.

RETAIL

Data analytics serves as a vital tool for retailers seeking to maintain a competitive advantage in a rapidly evolving market. By leveraging data to streamline operations, deepen customer insights, and drive growth, retailers can enhance their competitiveness and secure their position as industry leaders.

BSFI

The Banking, Financial Services, and Insurance (BFSI) sector is undergoing rapid change as it seeks to meet the growing demands of customers for seamless, omni-channel experiences. The rise of mobile banking and increasing technology penetration are transforming the industry and creating new challenges for financial institutions.

MANUFACTURING

The integration of robotics and AI is also leading to significant advancements in automation and customization in the manufacturing sector. AI algorithms can be used to control and monitor robots, making it possible to adapt to changing production demands and make on-the-fly changes to production processes.
